Doublefile Viburnum

(Viburnum plicatum var. tomentosum)

Alex X. Niemiera, Professor, School of Plant and Environmental Sciences, Virginia Tech

Summary

Foliage: Deciduous broadleaf

Height: 10 feet Spread: 12 feet

Shape: Upright with horizontal branching pattern

Doublefile viburnum is a large wide spreading shrub with a horizontal branching habit and a spectacular

flower display in spring.

Plant Needs

Zone: 4 to 8

Light: Partial shade to full sun

Moisture: Moist

Soil Type: Sandy, loam, or clay

pH Range: 3.7 to 7.0

Functions

Suggested uses for this plant include border, screen, and massing.

Planting Notes

Requires well-drained, moist soil. Will not tolerate heavy, clay soils with poor drainage. Plant in full sun for best flowering.

Care

Easy to maintain.

Problems

No serious pest problems.

Alternatives

Consult local garden centers, historic or public gardens and arboreta, regarding cultivars and related species that grow well in your area.

Cultivars of Viburnum plicatum:

'Mariesii' has larger and more abundant flowers.

'Roseum' has flowers that open white and fade to pink.

Comments

Doublefile viburnum is a large wide spreading shrub with a handsome horizontal habit. Creamy-white flowers bloom in flat clusters in late spring and "sit above" the foliage creating a layered effect. Flowers occur in a series of two flowers (side by side) along the length of a stem, hence the common name, doublefile viburnum. Flowers are followed by bright red berries in fall. Red berry color persists for a few weeks and then berries turn black. Fall foliage color varies with cultivar and is usually an attractive dark red/purple.
